SUMMARY

- **Core Expertise:** 6 years of experience specializing in infrastructure automation, CI/CD, and scaling cloud-native systems.
- **AIOps Integration:** Proven track record of designing secure deployment pipelines and integrating cutting-edge LLM-driven solutions utilizing AWS Bedrock and OpenSearch.
- **Operational Excellence:** Dedicated to driving system reliability through advanced automation, observability, and continuous delivery best practices.

EDUCATION

California State University, Fullerton

Master of Science, Computer Science

August 2018 - May 2020

University of Pune

Bachelor of Engineering, Computer Engineering

June 2013 - May 2017

SKILLS

Programming & Scripting: Python, TypeScript, Java, YAML, Groovy

Cloud & Infrastructure: AWS, Azure, Kubernetes, OpenShift, Docker, Terraform, Ansible, Helm, Packer

CI/CD & Monitoring: GitHub Actions, Jenkins, Prometheus, Grafana, PagerDuty

Databases: Firestore, PostgreSQL, MySQL, Microsoft SQL Server, Cassandra, ScyllaDB

AI Tools: AWS Bedrock, AWS OpenSearch, Claude API, PyTorch, Model Context Protocol (MCP), TensorFlow

PROFESSIONAL EXPERIENCE

Genesys Cloud

Senior Software Engineer (Media Ops Team)

November 2020 – Present

- Integrated Generative AI capabilities into cloud operations by developing custom Python automation and leveraging the Model Context Protocol (MCP), securely connecting internal infrastructure data with LLM environments.
- Administered high-throughput CI/CD infrastructure by provisioning AWS Jenkins build nodes utilizing custom Packer AMIs and Ansible, slashing environment setup time by 40% and sustaining 99.9% cluster uptime.
- Accelerated enterprise feature delivery by 39% through the automation of Terraform workflows and GitHub Actions, deploying highly available EKS Kubernetes resources equipped with automated rollback capabilities.
- Decreased manual CI/CD debugging time by establishing an automated root cause analysis reporting system, leveraging AWS Bedrock to instantly summarize Jenkins pipeline failures and suggest direct remediations.

PROJECTS

AI-Driven Root Cause Analysis (RCA) Jenkins Pipeline

- Architected an event-driven log extraction pipeline utilizing AWS Bedrock and AWS OpenSearch to automate LLM-based error analysis for failed Jenkins CI/CD stages.
- Reduced Mean Time to Resolution (MTTR) for build failures by 45% and eliminated manual console debugging by scaling the AI-driven troubleshooting tool across organizational engineering teams.

BFT Model Context Protocol (MCP) Integration

- Engineered a custom Model Context Protocol (MCP) server for the Cursor IDE, seamlessly bridging the AI assistant with a local Dockerized Basic Functionality Testing (BFT) environment to automate test execution.
- Accelerated overall project development velocity by architecting customized AI steering and skill files, providing the LLM with strict domain context to improve code generation accuracy and minimize hallucinations.

Base Image Automation

- Engineered Jenkins CI/CD pipelines to automate the build and centralized storage of base Docker images in JFrog Artifactory, accelerating version updates by 2x.
- Optimized security and compliance workflows by implementing a stage loop method within Jenkinsfiles, reducing Prisma and BlackDuck vulnerability scan times by 40%.

Genesys Engage AWS/OpenShift automation

- Streamlined cloud application deployments for the Engage team by developing reusable Terraform automation scripts and seamlessly integrating them with GitHub Actions CI/CD pipelines.
- Ensured the reliability of containerized environments by leading Kubernetes infrastructure deployments, authoring comprehensive technical documentation, and delivering ongoing operational support.
